

Afrobeutic Roles Explanation

There will be two types of Users in Afrobeutic.

1. General Customers
2. Afrobeutic admin or we call them "Platform Admin"

Who are customers?

- Those who have purchased subscriptions from our SaaS platform to create accounts and manage their salon and vice versa. Usually the salon owners will create an account on our platform.

Who are Platform Admin?

- Those who will track the Afrobeutic platform's progress, clients or accounts data

Scenario of Customers creating account in our platform

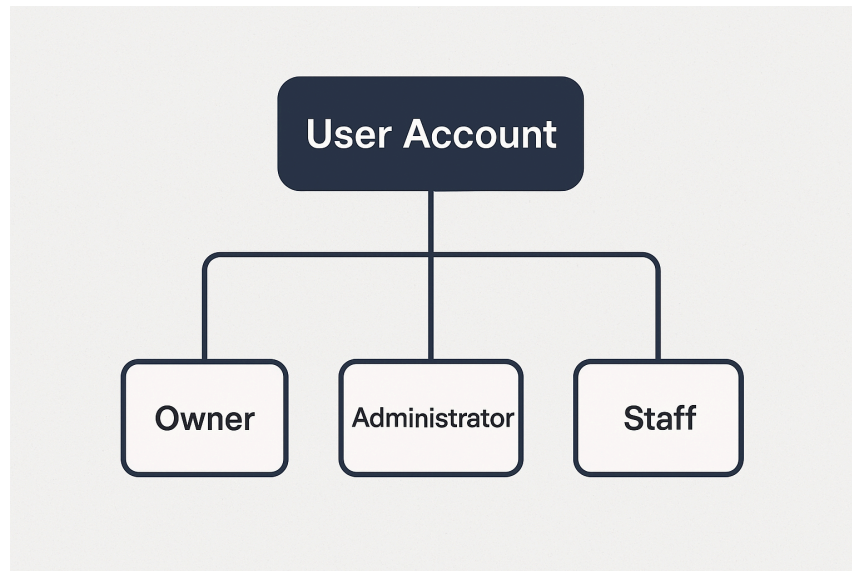

When a customer have finished registration, 4 things will be created at once:

1. A user item in Users table
2. A new account item in Accounts table
3. A new item in AccountsUsers table, and the user will be assigned as "owner" role in that account.
4. A Starter subscription package as a Trial period for 30 days

A user account will have 3 access role:

1. Owner
2. Administrator or admin
3. Staff

Each role will have different access in managing the User account. Remember under an account, there can be many **users** with different roles. But when they click on account settings, the owner's account will be edited. On the other hand, if they click on Profile settings, they will be able to edit their own user details.

Scenario of Platform Admin in our platform

Platform admin will have their own CRM to check business progress.

And platform admins will have 2 different Access role:

1. Admin
2. Staff
