

Tasks to fix/update - Frontend

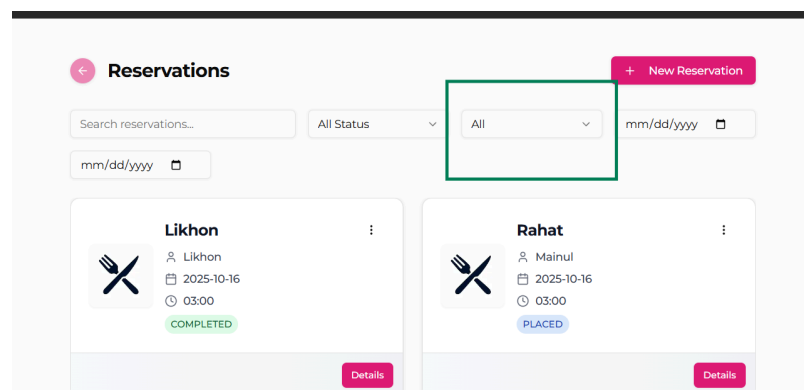

Dashboard

Active Promotion - type (Translation should be done)

Restaurant

- Restaurant creation form - Input titles (Translation should be done) + City, Street, Zip code should be Mandatory field
- Add new table form - Input titles (Translation should be done)
- Update table form - Same Translation issue
- Add menu, update menu form - input titles (Translation) + Update menu , Price cannot be negative value

Reservations

- The above mentioned (Green Square) filter is not working
- The date range filter should be joined together with a border, along with a reset button to remove dates from these fields to reset the filter
- If the admin wants to cancel a booking, the cancellation reason should be mentioned. Because an error shows while I want to cancel a booking.

Error: {cancellation_reason: ["This field is required when cancelling a reservation."]}

- When I try to create a manual booking, the "Reservation Status" field shows me wrong choice fields.
- All the form titles should be Translated perfectly. Including the Choice fields

Promotions

1. Promotion Creation and update form titles (Translation)
2. Promotion Create and Update - Trigger settings, "Days before" input can not be negative

Customers

- In Customer details, Special notes should be editable by Restaurant Admin.
- In the Customer details page, list of Reservation history, each reservation details items should show the booking status

Analytics

- The "Most visited" heatmap is not working.

General Fixings and Updates

1. Remove Profile Icon from "List of Reservations" and "List of Promotions". And put 3 items in one row. Currently it is showing 2 items.
2. Add Search filter + Pagination (show 10 each page) in every table view.
 - a. Promotion Report
 - b. Chatbot contacts
 - c. Customers
3. Add a "Download" button in each table view too. Rahat vai will later give you an API so that if admin clicks on "Download", an excel file will be downloaded.

REMEMBER, translate all the input titles, choice field names, Search- sort filter titles, Column headers
